CURRENT PROJECTS
AT SCUBA, USC

- **Unsupervised domain adaptation of speaker embedding:** Develop unsupervised domain adaptation techniques for a speaker embedding when no speaker homogeneous regions are available in the target domain.
- **Semi-supervised multi-task learning:** Training deep neural networks that can learn to de-noise speech, do speaker activity detection, and learn speaker characteristics in a semi-supervised setting.
- **Unsupervised learning of speaker characteristics:** Training deep neural networks that can learn speaker-specific characteristics from unlabeled multi-speaker audio streams, and its application on speaker classification and diarization.
- **Predicting physiology indicative of stress from acoustics:** Predicting physiology (like heart rate, respiratory sinus arrhythmia, blood pressure etc.) from acoustic features during stressful conversations between humans.
